

ANT130-L-Z Series nano Motion Technology

Mechanical Bearing, Linear Motor Vertical Stage

Nanometer performance in a large travel format

High resolution (2 nm), repeatability (75 nm),
and accuracy (300 nm)

In-position stability of 5 nm

Anti-creep crossed-roller bearings

High dynamic performance

Introduction

Aerotech's ANT130 series stages are the world's first nanometer-level positioning systems with greater than 25 mm travel. The ANT130-L-Z and ANT130-L-Z-PLUS crossed-roller stages are the best-in-class in combining speed, accuracy, resolution, repeatability, reliability, and size, and are offered in two accuracy grades. As an evolution of the popular ANT stage family, these linear stages exhibit enhanced motion performance over Aerotech's first generation ANT series.

Noncontact Direct-Drive

All of the original ANT series' direct-drive advantages have been preserved in the ANT130-L-Z family. Only noncontact direct-drive technology offers the robust, accurate, and high-speed positioning necessary for mass production of precision devices. ANT130-L-Z stages utilize advanced direct-drive technology pioneered by Aerotech to achieve the highest level of positioning performance. This direct-drive technology is high-performance, non-cogging, noncontact, high-speed, high-resolution, and high-accuracy. This unique drive and bearing combination, packaged in an extremely small-profile and footprint, offers tangible advantages in many applications such as high-precision positioning, disk-drive fabrication, fiber alignment, optical delay element actuation, sensor testing, and scanning processes that demand smooth and precise motion.

Flexible System Design

The ANT130-L-Z family has universal mounting and tabletop patterns that allow for easy system integration. Two, three, or more axes can be easily combined for flexible system designs and multi-axis configurations.

System Characteristics

Outstanding accuracy, position repeatability, and in-position stability require high system resolution. The ANT130-L-Z stage's industry-leading 2 nm minimum incremental step size provides this high level of performance. Excellent in-position stability, assisted by high-quality, anti-creep crossed-roller bearings, enables virtually maintenance-free operation over the life of the product. Aerotech's direct-drive technology has no hysteresis or backlash, enabling accurate and repeatable nanometer-scale motion.

Notes:

1. Certified with each stage.
2. In-Position Jitter listing is 3σ value.
3. Axis orientation for on-axis loading is listed.
4. Specifications are for single-axis systems measured 25 mm above the tabletop. Performance of multi-axis systems is payload and workpoint dependent. Consult factory for multi-axis or non-standard applications.
5. -PLUS requires the use of an Aerotech controller.

Notes:

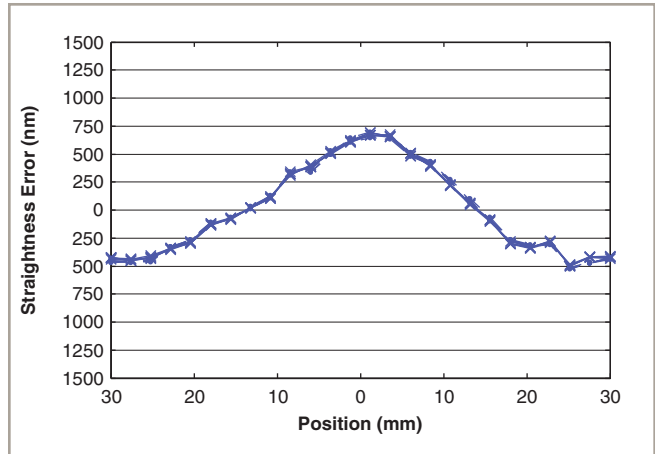

1. Linear amplifiers are required to achieve the listed specifications. Other options are available.

Note: To ensure the achievement and repeatability of specifications over an extended period of time, environmental temperature must be controlled to within 0.25°C/24 hours. If this is not possible, alternate products are available. Please consult Aerotech Sales Engineering for more information.

ANT130-L-Z/ANT130-L-Z-PLUS Series PERFORMANCE

ANT130-60-L-Z-PLUS accuracy and repeatability, five runs, bi-directional over an extended period of time shows the high level of system accuracy and repeatability.

ANT130-60-L-Z-PLUS straightness error, five runs, bi-directional. Exceptional and highly repeatable performance is assured with minimal straightness error.

ANT130-60-L-Z-PLUS yaw, five runs, bi-directional. Highly repeatable, minimal yaw error enhances system positioning accuracy.

ANT130-60-L-Z-PLUS pitch, five runs, bi-directional. Excellent repeatability/accuracy contribute to improved processing.
